

COMPANY PROFILE 2024

Company Background

Legogote Timbers was born out of the roots of Legogote Forestry Services, established in 2012 in White River, Mpumalanga. Originally founded as a timber harvesting company, we underwent a significant transformation in 2017, leading to our rebranding as Legogote Timbers.

With a fresh business mandate, our focus shifted towards the development and distribution of timber packaging materials, emphasising wooden cable drums and other packaging solutions.

Legogote Timbers has established itself as a reliable partner for large corporate entities seeking enterprise development and preferential procurement from local manufacturing businesses.

Currently, we proudly serve renowned companies such as Aberdare Cable, Alvern Cables, South Ocean Electric Wire, Hengtong Cables, Drumco and others providing them with top-quality cable drums and packaging materials.

Diversifying our offerings, we have ventured into the wooden crates and boxing sector, aiming to become a significant player in the market.

Our strategic alliances with sustainable raw material supply companies, EDM - Eswatini Drum Manufacturing and EPL - Eswatini Plantations provide us with a solid foundation.

EDM - Eswatini Drum Manufacturing, established in 2001 and Eswatini Plantations, founded in 1947, collectively employ around 1300 dedicated individuals.

From Timber Harvesting to Timber Packaging Mastery – Empowering Diversity, Building Partnerships and Crafting Quality Solutions for Industry Leaders.

Operating plantations spanning 7000 hectares, sawmills and a manufacturing plant, our group's comprehensive operations instill confidence in our raw material supply.

This ensures a consistent and reliable product supply to our end-users, establishing Legogote Timbers as a trusted and influential player in the timber industry.

Company Overview

A key player within a group of versatile companies dedicated to meeting all your timber requirements. Our commitment extends beyond the manufacturing process, as we are vertically integrated right from the growth of the logs.
